

## SUMMIT SERIES (GOB)

Slim Indoor Fine Pitch LED Display Superb Performance in your Budget

## • GOB (Glue on Board)

The biggest problem with the use of small-pitch displays is that it is very easy to damage the tiny LED. Because the SMD lamp is too small and the soldering pad is very small, a little force will crash the lamp, especially the LEDs located on the edge of the cabinet and the four corners that are the hardest-hit areas during the moving and installation. Once the lamp is broken, maintenance is very difficult and the cost is high.

GOB is Glue on board to get high protection led display, which is a new technology, an analogy as module encapsulation. It is working on the whole display module, by using a patented transparent glue covering thousands of small LED lamps. (The module getting the special shield on its surface.)

- Hanging installation
- Stacking Installation
- Wall Mounting Installation

- Cabinet weight 4kg only, easy to move, easy install
- Cabinet thickness 40mm only, slim design, save installation structure, save installation space
- Die casting cabinet, higher splicing preciseness, better flatness

• Full front access, all parts can be serviced from front side, no installation space required behind the cabinet

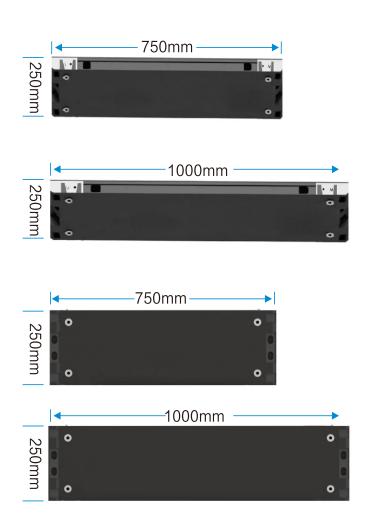

• 250x750mm and 250x1000mm cabinet could be easy to build any screen size for various projects.

40mm

• Data cable and power cable wiring from cabinet internal, easy connection
